

Identity and Security ER Diagram

Tenant isolation, stores, users, roles, permissions, sessions, security tokens, and audit history

Administrator MFA is stored on User; refresh sessions and one-time tokens remain separately revocable.

PK Primary key

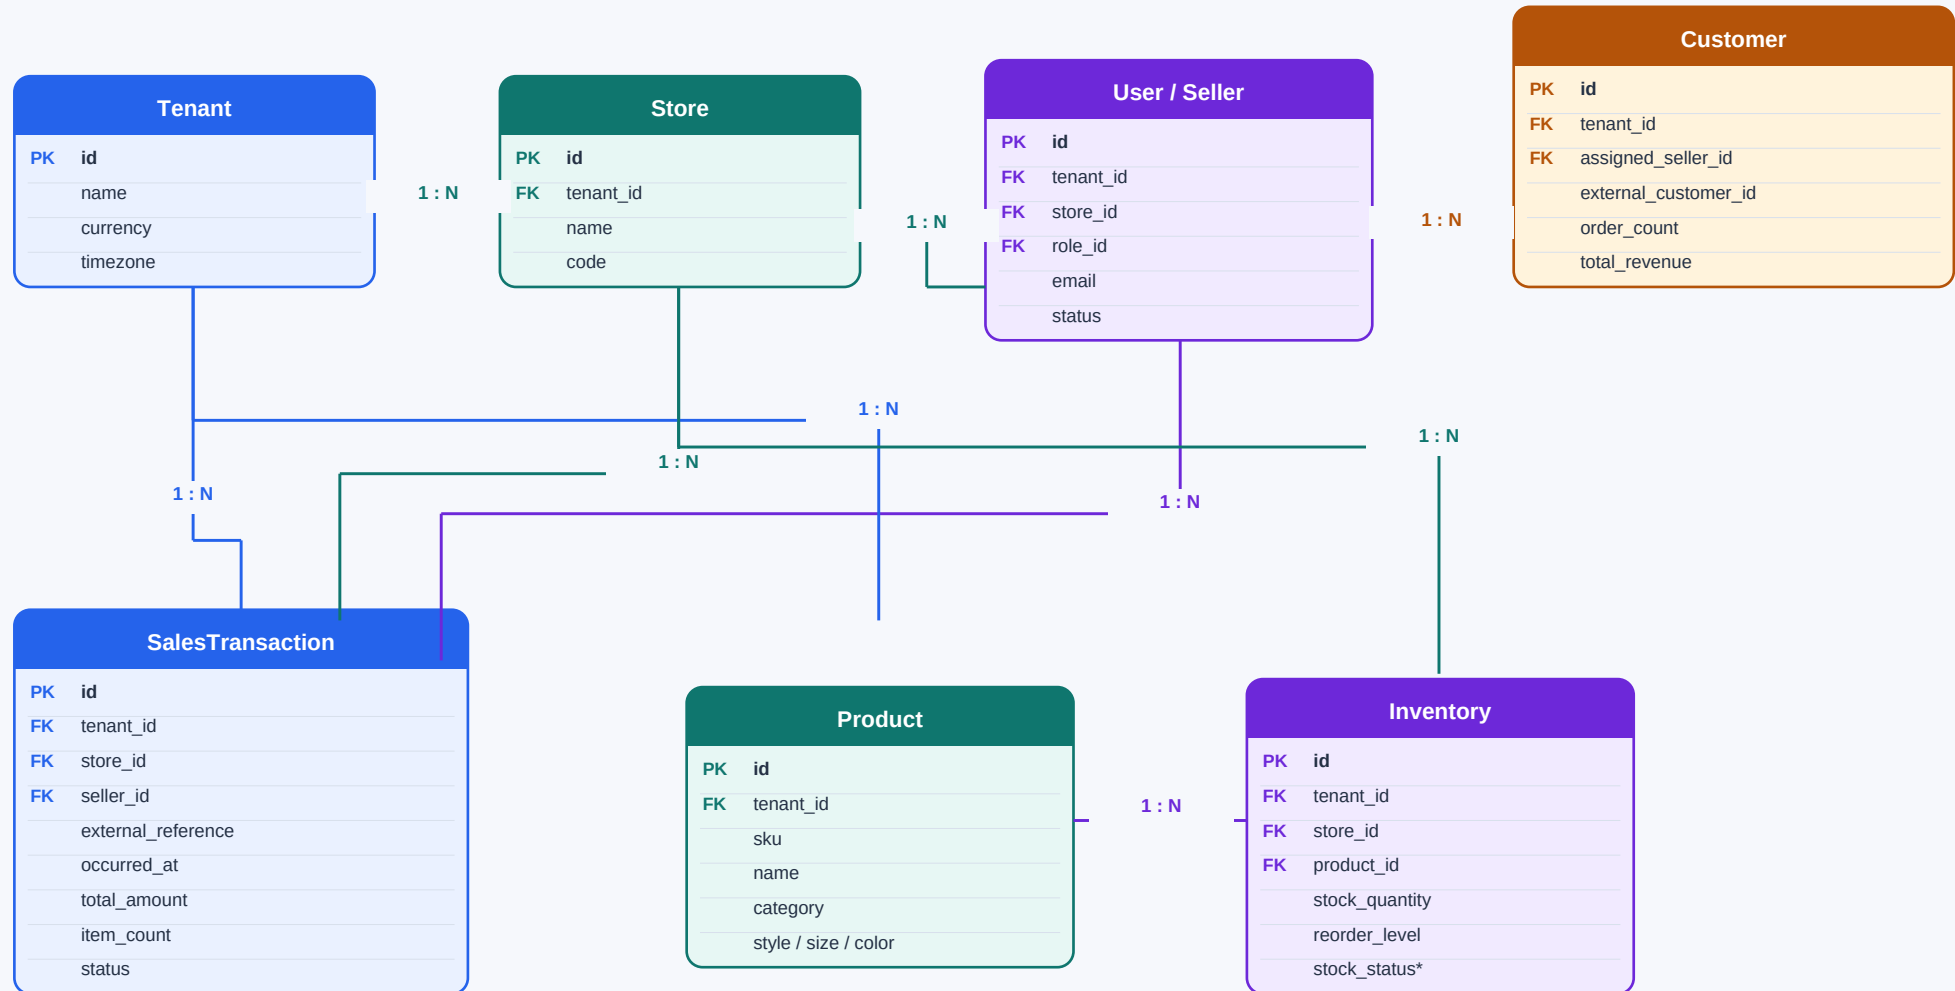

FK Foreign key

1 : N One-to-many

M : N Many-to-many through role_permissions

Operational Data ER Diagram

How tenants, stores, users, sales, customers, products, inventory, and audit records connect

* stock_status is calculated: zero = out_of_stock, at/below reorder level = low_stock, otherwise in_stock.

AuditEvent relationships are shown on page 1. Unique import keys use tenant, store, source, reference, SKU, product, and customer IDs.

Dataset-to-Database Pipeline

Repeatable preparation and import of sales, inventory, and customer datasets for Milestone 1

Why the pipeline is repeatable

Stable unique keys and upserts update matching business records instead of inserting duplicates.

Dashboard revenue, transaction totals, inventory counts, stock alerts, and customer summaries then come from stored records.

Milestone boundary: forecasting, recommendations, purchase orders, suppliers, and shipments remain planned for later milestones.
